Planning as a problem

**City of Forlì: feasibility study of the ministerial project system centro-nord**

*Manuela Barducci,  
Roberto Cavallucci*

The strengthening of the connections among infrastructure in the Forlì-Cesena-Ravenna triangle, and the fluidity of traffic of people and transport means, in a context of protection of the environment and valorisation of the enormous local wealth, represent the foundation of the context and local actions' of the ministerial SisteMa centro-nord. This project has the mission to strengthening the territorial relations among the transportation poles of the Romagna Forlì-Cesena-Ravenna triangle in order to take full advantage of the opportunities offered by the intersection of the east-west infrastructural axis parallel to via Emilia, the Adriatic corridor and the north-south Venice-Orte corridor is based.

A feasibility study of the aforementioned Sistema project, financed by the Ministry for infrastructure for a total amount of Eur 553,376.00, will be carried out by the Temporary joint venture, founded by Sintagma srl (representative), San Martino in Campo, Perugia; Ingeniería y economía del transporte sa (Ineco), Madrid (Spain); Metropolitana milanese spa, Milan and Systematica spa, Milan.

The project will focus on the benefits that can derive from the creation of a Romagna logistics platform through the strengthening of the different transportation poles throughout the territory (Forlì airport, Cesena truck terminal, Ravenna port, Forlì-Forlimpopoli rail terminals) and will demonstrate how this 'networking' can be practicable on an economical, administrative

and technical level.

In the tourism sector, the study defines a series of synergic actions among the different components of the existing environmental and cultural system, along with the eventual repositioning of those sectors that are not sufficiently integrated or rarely exploited, and foresees, as a context action, the constitution of a coordination and management agency for the Romagna logistics system. Finally, as a local action, the study envisages an in-depth analyse of the growth prospects for the Technological Aeronautical pole of Forlì.

The feasibility study shall provide all the relevant institutional representatives with a 'specific, globally verified' project that will allow for the provision of funding on a national and European scale in order to develop a territory capable of attracting new companies, from various sectors.
