North-Western Platform: 'Sit-Ins' as tool for territorial governance

Landscape unit and structural systems.
The regulative components of the plan
Cinzia Panneri

The Plan regulative function is aimed to protect those values that have motivated the Park institution, namely the sites and the resources and the institutionally protected landscapes, and to be protected with laws, bonds and prescriptions. The strict defense of the Park unit is compared, in this case, with the necessity to preserve the environmental continuity out of its perimeter and to accurately differentiate the kinds of care and to give value to the environmental cultural, economical and social specifications and of its various parts overcoming the limits of a territory discipline exclusively anchored to the traditional zoning for protection degrees and foreseen by the law 349/1991.

For these reasons, the regulative component of the Park is divided into three levels products, with a different role of limitation/guide.

The first one is the territorial framing of the Park, that is, the base of the construction of agreements between the Region, Park authorities and local authorities involved, with the purpose to agree on eventual measures for the ecological continuity preservation of Nature.

The second is structural framing of the Park, that is, the selective picture of the strong points, acknowledgements less questionable of which each project choice must take into consideration. They are the great ecological, morphological, settlement and functional components of which the protection goes beyond the perimeter of the Park, assuring the necessary continuity between the protected area and the context,

consequently defining from the administrative point of view, the geometry and dimension of the surrounding areas.

The structural framing is organized in five systems: (1) Geo-morphological and hydro-geological; (2) Vegetational, agricultural and forestry; (3) Settlement History; (4) Access and Fruition, (5) Relations, further articulated in components, to which specific regulations of the Plan correspond.

The third regulative level is that of the Conservative Zone which symbolizes an enrichment of the traditional zoning for levels and protection (zones A, B, C , D art. 12 l. 394/1991), articulated in Scenery Units.
